

Almost all construction technology and facilities include pipeline systems, whether it is industry, power engineering, or construction of civil amenities.

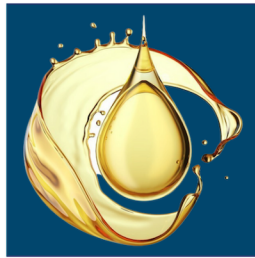

Delivering such pipeline systems is our primary and long-term activity. We are one of the key suppliers of line constructions to the gas industry and petrochemistry. We also implement pipeline systems in industry or power engineering.

We use steel pipes for various substances:

- water
- steam
- diesel
- ammonia

Our expertise and qualifications are born out of many years of installations and welding of steel pipelines, stainless, and plastic pipelines, namely PE. Our key accounts include Veolia, TAMEH, ČEPRO, and others.
